

# IN-HOUSE PA SYSTEM

The In-House PA System Control Panel is permanently installed and is situated to the rear right-hand corner of the stage area.

Turn-on the system by switching on the power—the white plug above the control box (see picture ‘A’) - this also controls the stage lighting and built-in projector.

Your music can be fed into the system in two ways; (1) wireless, using the Bluetooth adaptor provided (see picture ‘B’) or (2) wired connection, using the cable with the audio jack plug.

After switching on the system press the Bluetooth logo on the adaptor that is located inside the control panel this should already be connected into the “Line In” red and white audio sockets (see picture ‘C’).

The blue light will flash indicating that the unit is ready to be paired to your device.  
The device name is **“Esinkin BT Adaptor”**.

Once the system is paired to your device you should be able to play your chosen music. Volume can be controlled from your device or rotating the “Main Gain” control knob (see picture ‘D’).

As an alternative, and if your device has an audio jack connection (most modern mobile phones do not) you can replace the Bluetooth Adaptor with the cable (see picture ‘E’) that is stored inside the cabinet. This should again be connected to the red and white “Line In” sockets in place of the Bluetooth unit, volume control remains as above.
